LEGUAN LIFTS REACHES NEW HEIGHTS WITH UNIFORM ALL-TERRAIN SERIES

In the world of aerial work platforms, Leguan Lifts stands out for its commitment to technological innovation, reliability, and rugged performance. The Leguan All-Terrain Series Spider Lifts are purpose-built for the most challenging environments, offering unmatched safety and efficiency across all industries.

Leguan All-terrain series includes four models: the **Leguan 135 Neo**, **Leguan 195**, **Leguan 225**, and **Leguan 265**. All these models share uniform user interface, modular design and come with the intelligent **Leguan EDX** operating system. Ease of use and uniformity of the series makes the Leguan spider lifts an ideal choice for professionals in the construction, maintenance, arboriculture and facility management industries.

UNIFORM USER INTERFACE. At the core of Leguan product design is the easy-to-master user interface with intuitive joystick controls and self-explanatory lower controls. Leguan spider lifts are super-fast to get control of, with only short operator training you can start to operate the lifts safely and efficiently. The All-terrain series shares the same controls so you only need to learn how to operate one and you will know the rest. This unique trait makes Leguan suitable for both single person businesses and companies running larger fleets with multiple size lifts.

MODULAR DESIGN. Besides uniform controls, the All-terrain series shares many components such as engines, hydraulic components, chassis and drive motors, which means the production is streamlined and we have been able to implement a three-step formalized quality control procedure helping us to further improve in product quality, by harmonizing the quality procedure across all models. Modular design and shared components between the models also mean that after sales procedures from spare parts to service are uniform across the series, you only need to have technical training with one of our models and you will know the rest.

LEGUAN EDX. Our advanced and self-learning operating system is what really makes us stand out from the rest. Leguan EDX combines three core aspects into one cohesive framework.

- **Technological aspect:** Self-learning technology that constantly monitors user actions and cross-references them with existing data from the lift, ensuring safety and speed under all conditions and making it possible to operate even six simultaneous movements without hindering the lifts speed.
- **Operator aspect:** Easy-to-master and intuitive user interface which is shared across the fleet and supercharged with efficiency boosting automation which simultaneously reduces possible lift damaging operator errors.
- **After sales aspect:** Automated self-diagnostics and pro-active fault detection tools that help operator prevent faults before they occur significantly minimizing the lifts downtime and need for onsite service. In case of emergency the system can also isolate faulted circuits keeping the lift operational even in the extreme rescue situations.

Leguan All-terrain series is built to maximise efficiency without compromising safety. Series continues to redefine what professionals expect from spider lifts. With four uniquely capable models, the series caters to a wide range of industries and applications. Whether you need compact agility or towering height, Leguan has the lift for the job.
